

Learn Your Intelligence Type

There are seven different intelligence types. Each intelligence type is best suited to a particular way of studying.

Linguistic Intelligence

Linguistic intelligence is commonly referred to as being "word smart." If you have linguistic intelligence, you are probably very good when it comes to understanding and manipulating words, letters, and phrases. People who are word smart love to read, play word games, and write down notes and stories. They also like to discuss information actively with others.

Study Tips: If you possess linguistic intelligence, try taking detailed notes when you are reading or working on the internet. Keep a personal journal of what you learn, describing what you think about different issues related to learning topics. You might also try creating and using flash cards in order to memorize materials.

Logical/Mathematical Intelligence

Logical/mathematical intelligence is sometimes referred to as being "number smart." If you are number smart, you work well with numbers and equations, as well as logic problems. People with logical/mathematical intelligence are also capable of coming up with effective [solutions](#) for complex problems.

Study Tips: If you possess a lot of logical/mathematical intelligence, try making charts or graphs of the information you have learned. Classify and categorize your notes when you are studying or organize class materials according to importance to help you stay on task.

Spatial Intelligence

People who possess spatial intelligence are often referred to as being "picture smart." If you have spatial intelligence, you are excellent when it comes to creativity, art, and drawing. You also learn best when you are able to express your ideas visually.

Study Tips: Spatial learners should make use of their love of pictures when studying. Try creating pictures to represent certain terms or concepts from your class material. Sketch pictures alongside your notes to help you remember ideas and create graphs and charts to visualize information.

Kinesthetic Intelligence

People with kinesthetic intelligence are often referred to as being "body smart." These people learn best by doing and love to work with their hands. They enjoy exercising and being outdoors.

Study Tips: People who are body smart can learn effectively by acting out concepts from class. Try linking your newly acquired knowledge with real life examples or interact with others when studying.

Musical Intelligence

If you have musical intelligence you are "music smart." This means that you can understand the relationship between logic and creativity, particularly when it is manifested as sounds or beats. You excel when it comes to working with different rhythms.

Study Tips: Musical learners can enhance their studying by listening to music when completing online learning. You might also try to create rhymes or mnemonics to help you remember [important information](#).

Interpersonal Intelligence

People with interpersonal intelligence are "people smart." They enjoy working actively with others and know how to express their ideas and opinions effectively. People with interpersonal intelligence relate well to others and enjoy discussing things with family and friends.

Study Tips: If you have interpersonal intelligence, you will probably study best when surrounded by others. Discuss class materials with fellow classmates in online forums, or join a study group online.

Intrapersonal Intelligence

If you have intrapersonal intelligence you are "self smart." You excel when it comes to working on your own and you have the ability to figure things out for yourself.

Study Tips: If you have a lot of intrapersonal intelligence, you may want to focus on studying alone. Find a quiet place without distraction where you can learn effectively. Try keeping personal notes alongside your class materials to help clarify concepts and ideas.
