The Argument from ___________ (A.K.A. The _______________________ Argument)

Syllogism:

__________________: The more ______________ something is, the more likely it is a product of ________________ (and not ________________).

__________________: The ________________ (and many things within it) are ________________ more ________________ than all ______-made design.

__________________: Therefore, the ________________ is a product of ________________ (and not ________________). The ________________ of the ________________ is what we call ________________.

Examples of Complex Harmony in the Universe

1. Over ______ different species of ______________________ help keep tropical rainforests growing and alive by eating fruit and then going to the ________________ all around the forest (and therefore spreading the fruit ________________).
2. Over ______ different ______ species help control ________________ numbers by eating them every night. They are also major agents of ________________ and ________________ dispersal, without which many crops would fail.
3. Over ______ different species of ______ help pollinate all kinds of crops. An Oxford expert says, “We rely upon ______ for just about every vegetable, flower, and fruit around… We would face mass ________________ without them.”
4. Over ______ different species of ______________________ in the ocean produce ________________ of the world’s oxygen. Without them life on earth would cease to ________________.
5. The ________________ is extremely complex. Organs, blood vessels, nerve endings, antibodies, and everything else constantly work together to keep you alive. Plus, the human ________________ is widely recognized to be the most complex design in the entire universe.
6. The ________________ Principle asks the question, “Why are the conditions on earth ________________ for my survival?” In order to support life, a planet cannot be too close or too far away from a ________. If earth were a little closer to our star, the ________, it would be ________________ and impossible for life to exist. If earth were a little farther away from the sun it would be a rock of ________________ and impossible for life to exist. But our planet, earth, is the perfect distance away from the sun, which gives us the possibility of existing.
7. The ________________ Principle asks an even bigger question, “Why is the ________________ itself just right for life?”
Analogies

A. If you took a big box of loose _______ and shook it for
   over a million years you would _______ expect to eventually discover a perfectly
   formed ____________________________.

B. If you were walking through the Amazon rainforest and stumbled upon a working
   _______, you would not think, “Wow! This must have been made over
   millions of years by pure, __________________________!” Instead, you
   would think, “__________________________”.  

C. If you found a working ___________ on a deserted island you would not think,
   “Wow! This was probably the result of a __________________________!” Instead,
   you would think, “__________________________”.  

   a. The universe is ______________________ more amazing and complex than a Lego
      model, wristwatch, or computer.  
      Therefore, it seems ____________% logical that something intelligent made it.

Conclusion

Is it possible that design happens by chance without a designer?

“Someone once said that if you sat a million ___________ at a million ___________ for a
   million ___________, one of them would eventually type out all of ________________
   Hamlet by chance. But when we find the text of Hamlet, we don't
   wonder whether it came from chance and monkeys. Why then does
   the atheist use that incredibly improbable explanation for the
   universe? Clearly, because it is his only chance of
   ______________________ an atheist.” – Peter Kreeft

Doesn't evolution show us that a designer isn’t needed?

“Just the ____________. Evolution is an amazing example of design, a great ___________ to
   God.” – Peter Kreeft

"Evolution in nature is not at odds with the notion of creation because evolution presupposes the
   creation of beings that evolve." – Pope Francis

The F-Word

In the end, an atheist must have more ____________ to believe that the universe was made by
   random chance than a theist needs to believe the universe was a product of design.
